

Matrix42 – the #1 European Vendor for Unified Endpoint Management (UEM)

Overview

Matrix42 is the European leader for digital Workspace Management.

The vendor is unique and known for **unifying classical Client Management (CMT) with modern Enterprise Mobility Management (EMM) in a single, responsive Web User Interface (UI).**

This Unified User Experience (UUX) can be **easily adapted by customers** to their needs and is **powered by a graphical Workflow Studio**, which empowers controlled rollouts and much more.

Gartner Magic Quadrant

“Being in the Magic Quadrant means the vendor is a leader already”

- Gartner

Strengths

Unified (IT) User Experience (UUX): Matrix42 is the only vendor with a unified admin console across traditional Client Management for Win32 Applications as well as modern Enterprise Mobility Management (EMM) combined with a Self Service Portal for employees to request hardware, software and services themselves. Approval and Provisioning Workflows automate this process completely with minimal IT workload.

Support for all major platforms: Matrix42 comes from Windows, macOS, iOS and Android Management, but offers support for workplace IoT, such as Raspbian, Apple TV and other common enterprise devices.

European focus, ready for global usage: Matrix42 has a strong presence in the EU and has addressed the North American market but serves other markets and geographies only “at customer request.”

Matrix42 is again the best rated European Vendor to be included in the Gartner Magic Quadrant for UEM.

Unified Endpoint Management needs to be truly unified as a holistic approach to the modern Workspace

Fully Integrated into Business, IT and Security Processes:

- Streamlined Employee Onboarding with a zero-touch workflow for IT through all digital systems.
- Provisioning for cloud-based applications and access control via Conditional Access and Matrix42 *Secure Container*.
- Malware Protection baked-in including real-time blocking of malware outbreaks and automated remediation.
- Data Protection baked-in with seamless encryption so that end users can't leak any data by accident and reactive behavioral workflows in case of data theft attempts.
- Automation to manage Windows, macOS, iOS, Android and many other operating systems in a single UI and Product.

Platform agnostic and made for your IT workflow:

- Drop-ship your devices directly to your employees without touching or interacting with them powered by the Windows 10 Autopilot and self-service device onboarding.
- End-2-End enrollment for Windows 10 and macOS devices through the powerful combination of traditional Client Management with modern Mobile Device Management in a single product.

Made for IT to deliver true Employee Experience:

- “One UI to Bind Them All” – UEM is presented by a single responsive web UI called Unified User Experience (UUX) that work in any browser and on any device.
- The UUX is based on a powerful low-code platform called SolutionBuilder and a graphical Workflow Studio that enables you to adjust anything you see and happens to tailor it to your processes.
