

Protect your organisation data from **Ransomware** Safeguard your data with immutable storage

Organisations are already dealing with the exponential growth of the data they handle. They now face the added complexity of a rapid shift to online learning which has put them under even more pressure to manage and protect their data and data infrastructure.

The pace and scale of ransomware attacks is now headline news around the world. Ransomware attacks are now becoming more targeted and sophisticated. As a consequence, ransomware is currently one of the key threats to any organisation's survival.

Unfortunately, many ransomware attacks continue to infiltrate despite the use of state-of-the-art prevention methods. In fact, 77% of organisations infected with ransomware were running up-to-date endpoint protection.

Ransomware can encrypt your files making it impossible to use them. The malware may lay dormant for weeks and may even delete your backups prior to the attack leaving you without a way to recover and forcing you to pay or lose your data.

OneXafe Continuous Immutable Snapshots to the Rescue

OneXafe protects your data with continuous immutable storage, every 90 seconds, so you'll never have to worry again. Immutable storage is a copy of your data that simply cannot be overwritten or deleted by ransomware or users, because OneXafe and its patented distributed object store prevent that from happening. You can recover anytime, every time, making OneXafe the most effective protection in the market. OneXafe's scale-out architecture expands storage seamlessly. Add one drive at a time, or multiple nodes within a cluster, without any configuration changes to the application. OneXafe also minimises storage requirements with powerful data reduction technologies such as inline deduplication and compression, reducing costs of storage and operational expenses.

OneXafe

- ▶ Scale-out data storage
- ▶ Simplify the management of your backup infrastructure
- ▶ Recover Terabytes in seconds

Installed on
over 1,000,000
machines

99.999%

guarantee

Are you Ransomware Ready?

Powerful integration
for defence against
cyberattacks & data loss

StorageCraft keeps organisations' critical information always safe, accessible, and optimised with data protection, data management, and business continuity solutions.

Data Protection 24/7/365

Constant data availability is a must for organisations. Choose data protection solutions for your unique IT environment.

OneXafe

Simplify your operations and reduce costs. OneXafe eliminates management complexity while significantly reducing storage costs via scale-out storage.

OneSystem

This cloud-based management service for ShadowXafe and OneXafe makes oversight powerful, simple, and intuitive. Manage from anywhere.

ShadowXafe

Next-generation data protection solution delivers multiple fast recovery options and a workflow optimised for management simplicity.

OneXafe Solo

OneXafe Solo 300 uses StorageCraft OneSystem for cloud-based management from anywhere, at any time, through any web browser.

ShadowProtect

Continuous image-based backups for fast, easy, reliable disaster recovery. Access, migrate, and restore your data with remote management.

Granular Recovery for Exchange

GRE works with your backups to protect email. Use to search for and recover Microsoft Exchange message data.

ShadowProtect IT Edition

This standalone tool for the system admin is available via subscription for restoring and backing up machines without installing software.

File Backup and Recovery

Not all data is critical to business operations. This online file backup solution identifies and protects only the data that's important to the business.

Cloud-Based Protection

Local backups are only as secure as their location, and SaaS data is also vulnerable. Keep your data safe in the cloud. Recover your data from anywhere.

Cloud Services

StorageCraft Cloud Services stores your backups remotely so you're ready for the worst. Recover data, even virtualise your machines and re-create your network in our purpose-built cloud for disaster recovery.

99.999+

Access cloud data anywhere, anytime using our purpose-built disaster recovery cloud that features 99.999+ percent uptime.
