

POWER PLATFORM JUMPSTART

**Proof of Concept (POC)
application leverages
reusable low-code/no-code
building blocks that drive
automation for business
processes.**

The Cognizant Microsoft Business Group takes you through automation journey possibilities, demonstrating how Power Platform can accelerate ROI and business value. We ensure strategic alignment and produce a roadmap that supports your goals. Our experts help you identify a high-value use case, near term KPIs and key measures of success. Then we lead your team through a workshop to collect business requirements and build your POC solution.

Power Platform's pre-built templates and pre-built connectors are the foundation to efficiently and securely integrate with your key business systems, including Dynamics 365, Microsoft 365 and Azure. This allows you to automate repetitive and time-consuming tasks, reduce errors and demonstrate how IT and business teams can kickstart innovation together.

Unlocking Innovation with the Power Platform

Power BI

Data-Informed Business Decisions. Learn about automation journey possibilities and make informed, confident business decisions by putting data-driven insights into everyone's hands.

Power Apps

Rapid Application Development. Turn ideas into organizational solutions by enabling everyone to build custom apps that solve business challenges.

Power Automate

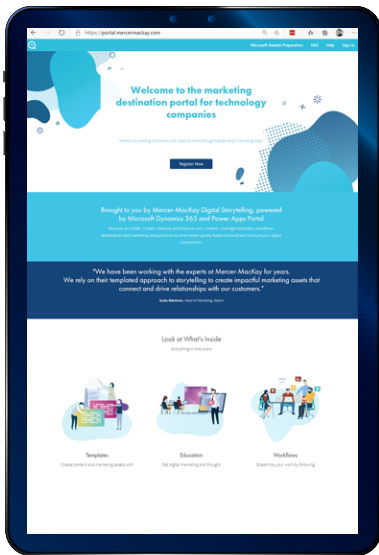

Business Process Automation. Boost business productivity to get more done by giving everyone the ability to automate organizational processes.

Power Virtual Agents

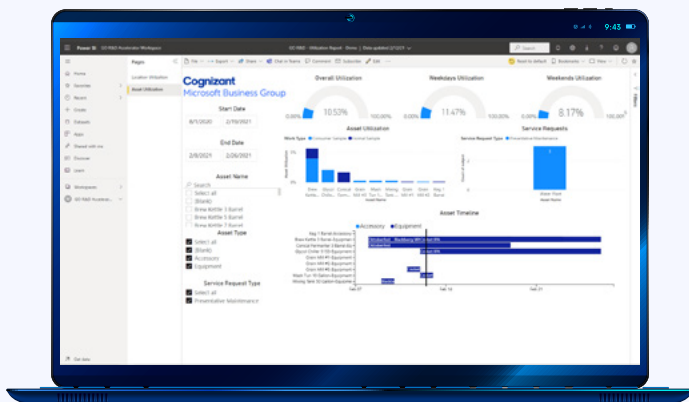

Intelligent Virtual Agents. Easily build chatbots to engage conversationally with your customers and employees – no coding required.

Key Benefits of the Power Platform

Microsoft Power Platform enhances your business through leading visualization, automation and analytics features. You can discover new insights to empower your organization. Power Apps help you to become your own developer through their prebuilt templates, drag-and-drop simplicity and quick deployment. Power BI dashboards bring data to life with rich visuals, making what is typically complex data-mining an easy self-service function for the end-user. The software's data security capabilities include sensitivity labeling, end-to-end encryption and real-time access monitoring.

Elevate Your Power Platform Usage with Ease and Governance

Governance enables business groups to focus on solving business problems efficiently while avoiding app sprawl and complying with IT, business compliance and UX standards. Through architecture, security and licensing measures, Power Platform ensures an optimized and protected work environment. Power Apps and Power Automate provide users with only the necessary data and nothing more; it also prevents data loss with data loss prevention rules. You can build out the policies you need with Power Platform. Monitoring, a critical aspect of managing scaled software, is made easy with audit trail reviews, licensing reports and more.
