# Enterprise Resource Planning Modernization Is Key to Digital Transformation

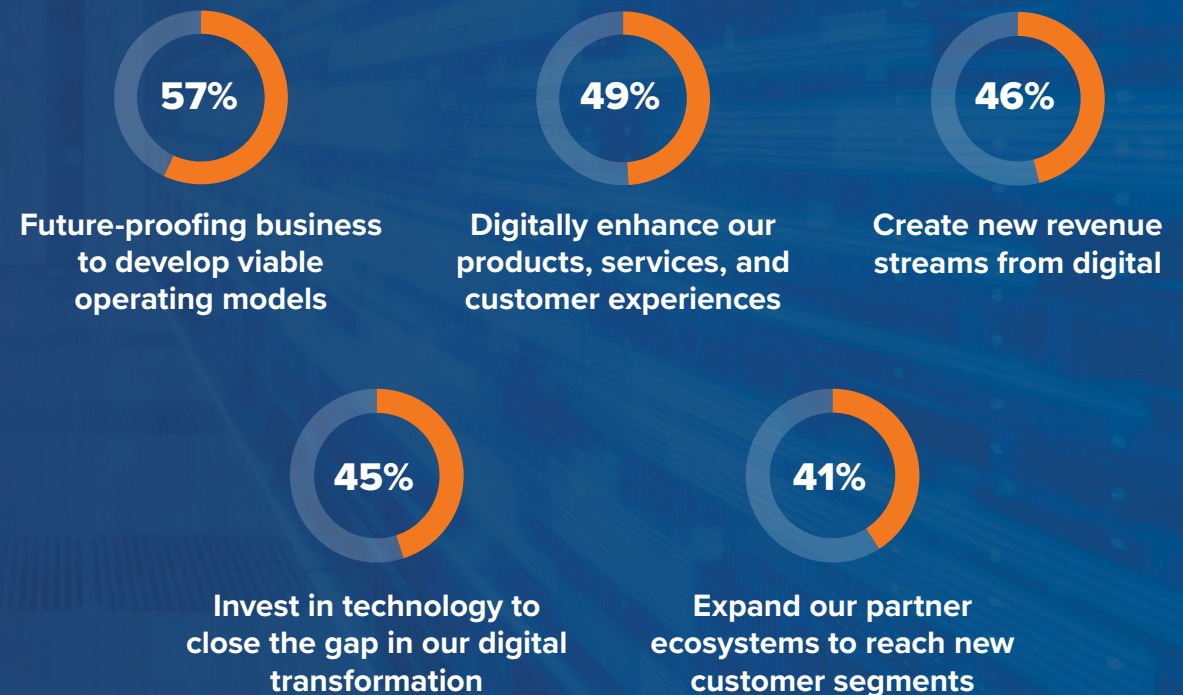

In **65%** of European organizations, the CEO has made digital transformation (DX) an integral part of the business strategy that will continue to drive digital initiatives forward in 2021.

The top goals for 2021 and beyond are focused on accelerating digital transformation at all levels of the organization, ranging from developing operating models to investing in IT systems and ecosystems.

To achieve digital transformation at scale, organizations need to modernize their enterprise resource planning (ERP) systems, which for many in Europe are from SAP.

**Return to growth in 2021 through accelerated digital transformation.**

## What are your organization's top goals for 2021–2022?

Sources: IDC's European IT Buyer Sentiment Survey, Wave 13, October 2020; EMEA n = 350 and Wave 15, December 2020; EMEA n = 430

# SAP Modernization Means Linux and Open Source

**Digital transformation activities over the past five years have moved many enterprises to a new level.**

Organizations that are digitally determined typically have a multiyear strategy, an integrated road map of use cases, and investment in a digital platform.

**SAP customers must standardize their SAP landscapes on Linux as SAP HANA is a Linux-only database and SAP S/4HANA runs solely on SAP HANA.**

The Linux operating system in an SAP landscape is part of a larger open source technology portfolio that plays a critical role in managing the landscape.

**IDC conducted a large (n = 1,212) international survey among businesses that are on an SAP modernization journey,** including 552 businesses in Europe, the Middle East, and Africa (EMEA), of which 151 were in Germany, Austria, and Switzerland (DACH) to determine businesses' current ERP state, their aspirations and challenges, and what role the Linux operating system plays in the transformation of their SAP ERP landscape.

**Learn from 552 EMEA businesses about their DX strategies and the value of ERP modernization.**

# Removing Silos and Fragmentation Are Key Objectives

Typical challenges with legacy ERP systems:

## Fragmentation

Multiple ERP instances and lack of integration that hamper business performance:

- ▶ **High technical debt that prevents enhancements**
- ▶ **Inability to support end-to-end processes**
- ▶ **Inability to provide an instant businesswide view of key data**

## Historic Data

Infrequent updates of multiple data sources:

- ▶ **Delayed or underinformed decision making**
- ▶ **Difficulty in building forward views and forecasts**

## Static Processes

Static IT processes that limit IT automation:

- ▶ **No real-time data orchestration**
- ▶ **Slow execution of business processes**
- ▶ **Constricted workload operations**

**Organizations can't succeed in modern business with the deficiencies of the generation of technology.**

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; EMEA including DACH n = 552

# Current Enterprise Resource Planning Estates Are Ripe for Modernization

EMEA: What does your current ERP estate look like?

▶ European organizations need to modernize their aging ERP estates to succeed in the digital era.

▶ Nearly half (48%) of European organizations are still running multi-instance ERP packages that provide limited to no visibility on operational performance.

▶ European organizations must ensure that silos do not recur in their SAP S/4HANA ecosystems.

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; EMEA including DACH n = 552

# Organizations Seek Digital Transformation and Operational Efficiency

In 2021, European organizations will need agile, end-to-end processes and access to real-time data. They must balance operational efficiency with innovation and customer experience in order to achieve their goals for digital transformation and IT operations efficiency.

## Digital Transformation Goals

A major investment such as ERP modernization must be directly linked to digital transformation and customer benefits.

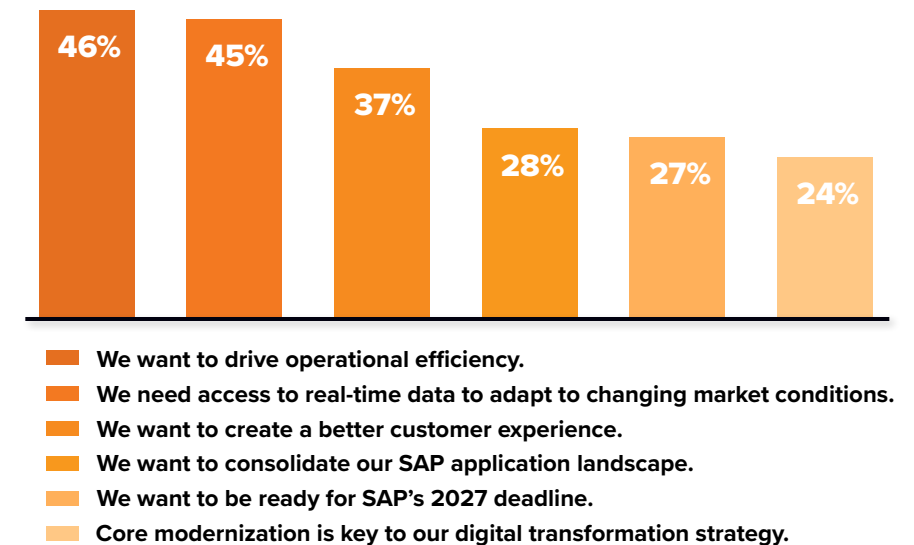

- ▶ Gain access to real-time data to adapt to changing market conditions (45%)
- ▶ Create a better customer experience (37%)

## Efficiency Goals

A key role of the ERP system is to enable efficient operations; moving to SAP S/4HANA must deliver a step change in efficiency. Almost half (46%) want to drive efficiency in:

- ▶ Business operations
- ▶ IT operations

## EMEA: Why are you considering moving to SAP S/4HANA?

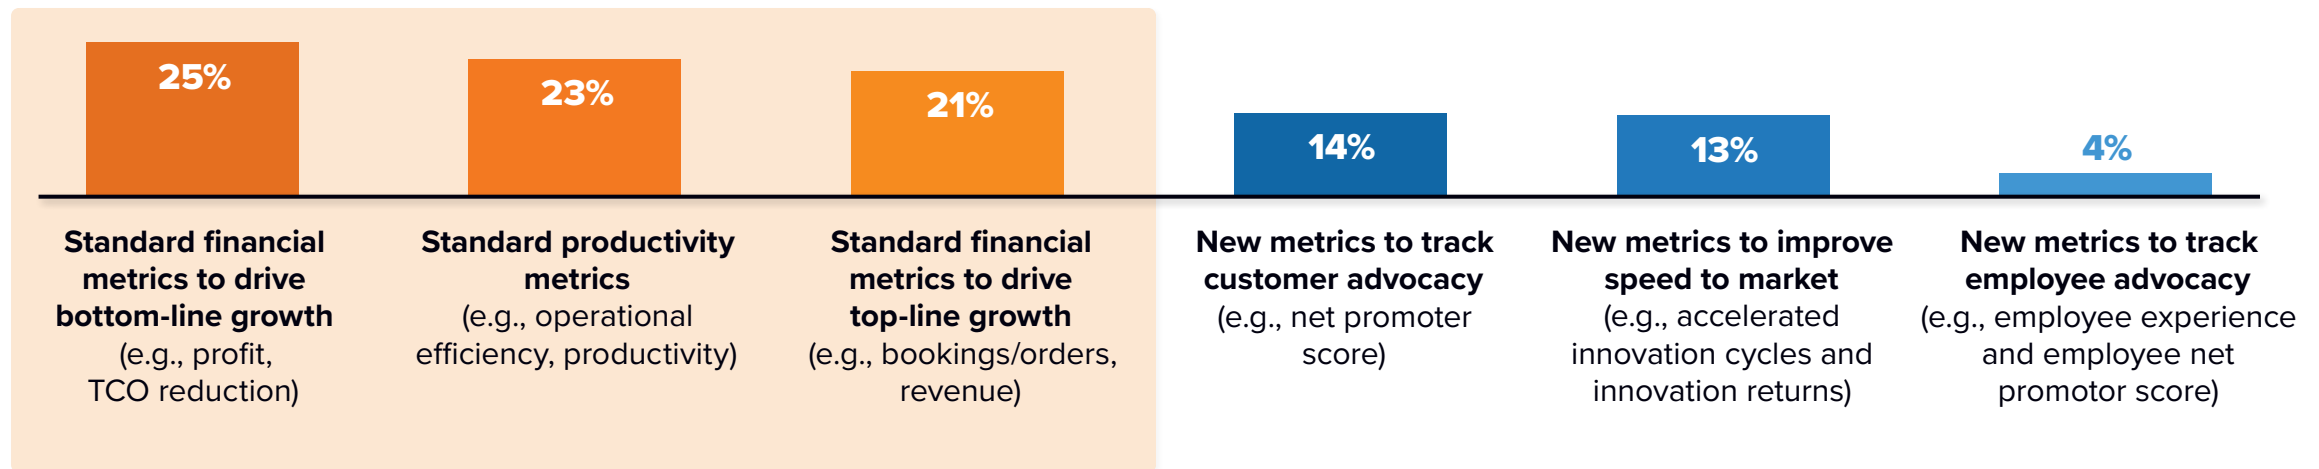

The case for SAP S/4HANA is based on achieving business outcomes.

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; EMEA including DACH n = 552

# SAP Modernization Is Based on Business Outcomes

EMEA: What are your metrics for building the business case for ERP modernization?

The business case for SAP S/4HANA is still based on standard metrics:

- Financial metrics to drive bottom-line growth (profit)
- Productivity metrics
- Financial metrics to drive top-line growth (revenues)

Newer digital transformation-related KPIs are less adopted:

- Customer advocacy
- Speed to market
- Employee advocacy

**Business outcomes are achieved by tightly integrating SAP into key business processes.**

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; EMEA including DACH n = 552

# A Modern, Full-Stack Ecosystem is a “Must Have”

A digital platform is the foundation for core apps and cloud-native apps.

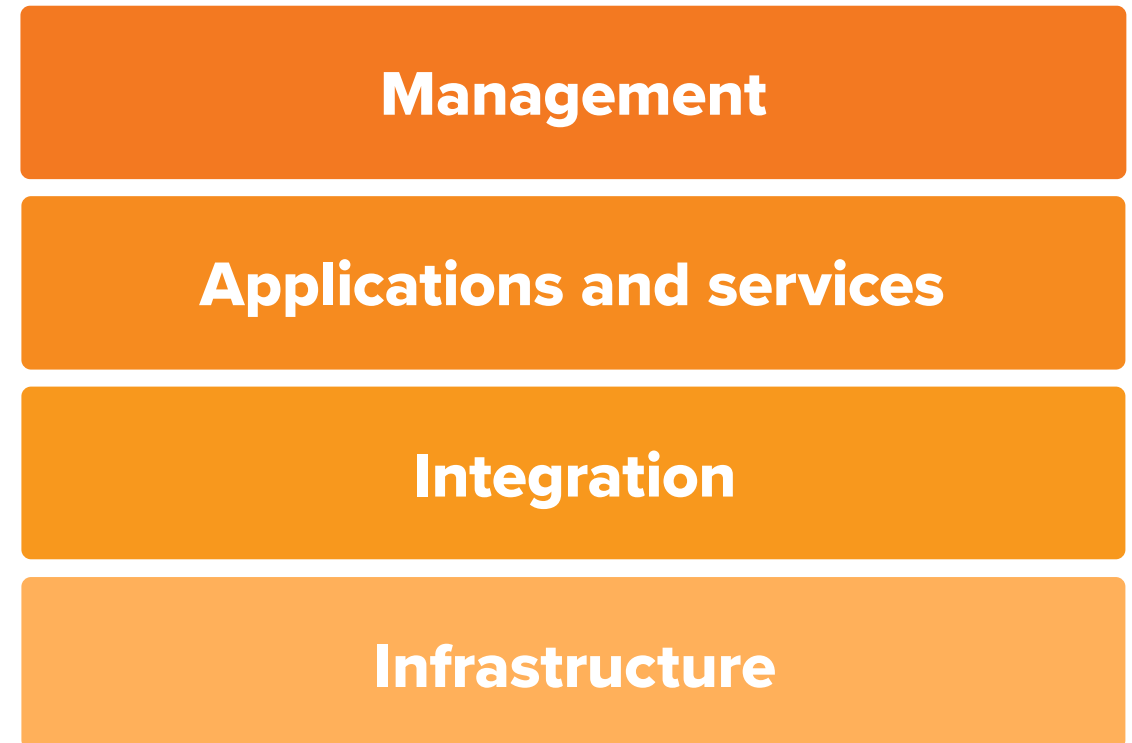

**By 2024**

of enterprises will prioritize infrastructure agility and operational efficiency, leading to an increase of five times in the adoption of cloud-native architectures for core business applications.

**Digital platforms and open ecosystems prevent infrastructure restrictions limiting the power of their SAP S/4HANA platform.**

## Cloud-Native Architectures Are Based on Open Source & Open Standards

Source: IDC's FutureScape: Worldwide Future of Digital Infrastructure 2021 Predictions, October 2020

# Innovation, Flexibility, and Control Regardless of Workload Destination

Cloud is a key enabler for ERP infrastructure modernization, and European organizations have a strong preference for the various cloud options.

The digital platform approach enables European organizations to run their SAP S/4HANA environment efficiently wherever they want.

Almost half (47%) of European organizations are also using SAP cloud platform to integrate with and run SAP business applications.

**There is a demand for technology that enables SAP S/4HANA to reach its potential on whichever infrastructure it resides.**

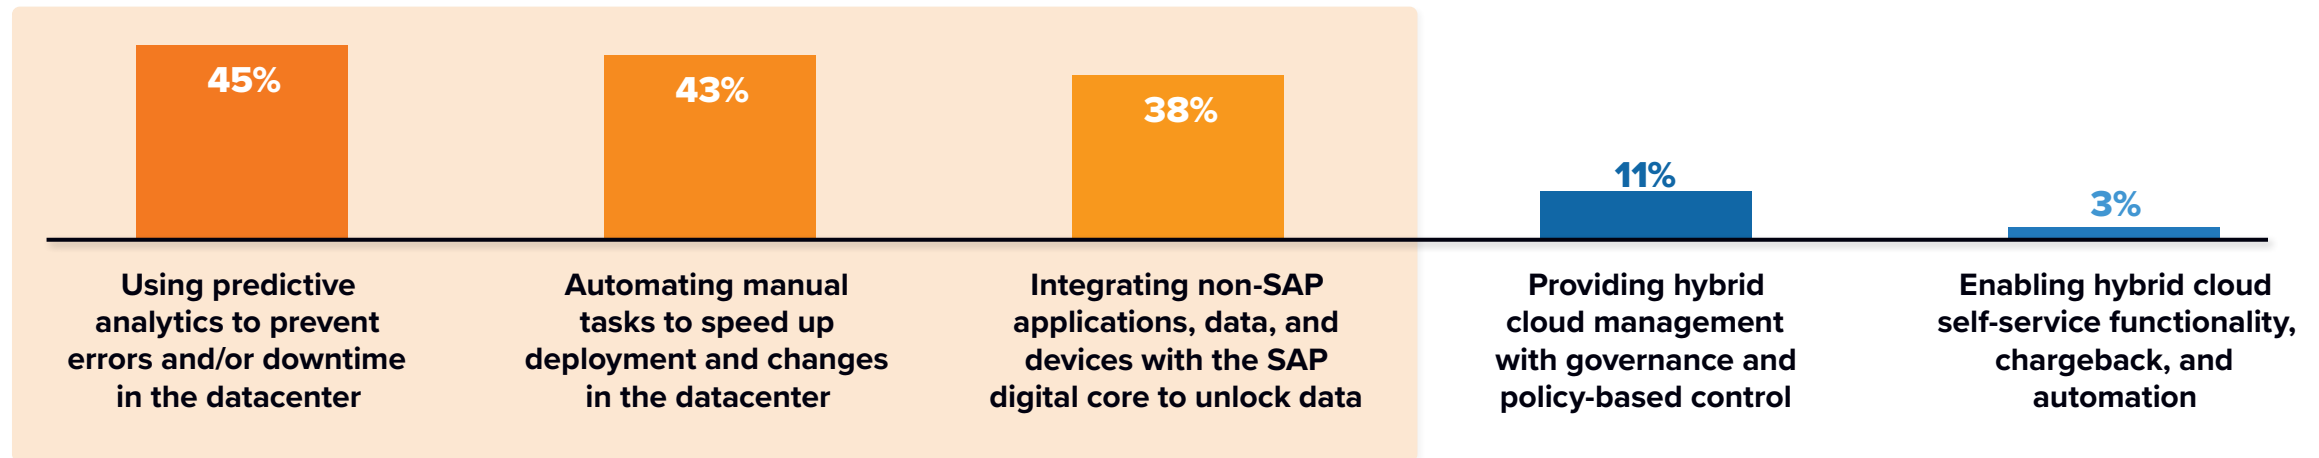

## EMEA: Where is (or will) your organization's SAP ERP, SAP Business Suite powered by SAP HANA, or SAP S/4HANA running?

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; EMEA including DACH n = 552

# The Operating Ecosystem Enables Platform and Innovation Capabilities

**EMEA: Which of the following general operating ecosystem capabilities is your organization using (or will use) to support the SAP landscape?**

Organizations see the operating ecosystem as key to managing and extending their SAP landscape:

- Enable cloud-native development environment
- Automate and optimize infrastructure management
- Integrate applications and operate a hybrid cloud model

**The operating ecosystem drives business outcomes through integration and extension and delivers efficiency and reliability through automation.**

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; EMEA including DACH n = 552

# Digital Transformation Requires an Open Operating Ecosystem

The operating systems needs to enable infrastructure capabilities such as:

- Virtualization
- Public cloud management
- Private cloud management
- Hybrid cloud management

EMEA: Please indicate how your organization considers (or expects to consider) the operating system for the SAP ERP applications?

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; EMEA including DACH n = 552

# Hybrid Integration is Essential for Enterprises

**EMEA: Which of the following capabilities for integration with SAP S/4HANA to connect applications across hybrid architectures are (or will be) part of your SAP landscape?**

- ▶ European organizations recognize that they will operate a hybrid architecture.
- ▶ They must prevent disconnected silos from re-emerging, as occurred with the previous generation of technology.
- ▶ Application integration with SAP S/4HANA starts with an open source container orchestration system for application deployment, scaling, and management.

- ▶ API connectivity, data transformation, and service orchestration are important next steps.

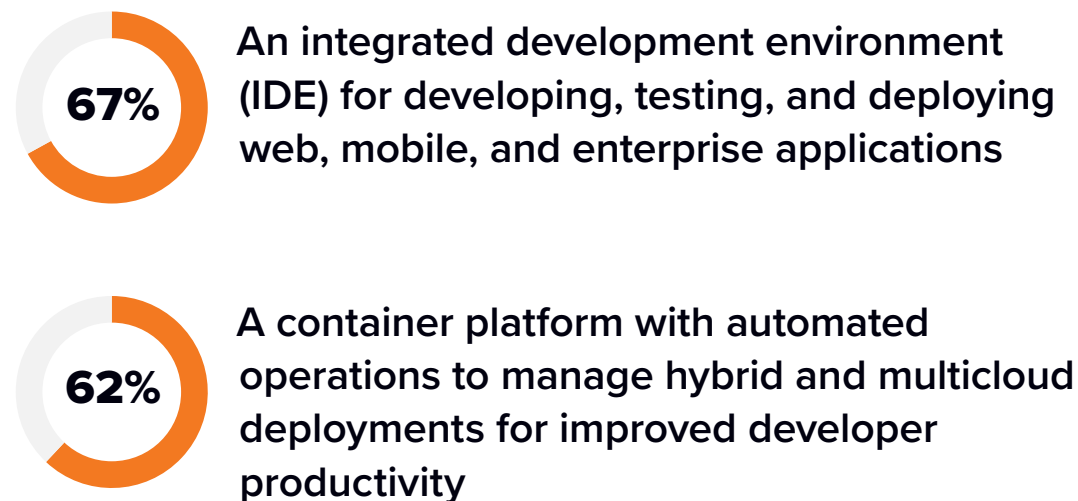

**SAP S/4HANA will co-exist with and benefit from cloud-native applications.**

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; EMEA including DACH n = 552

# Containerized Applications and Cloud-Native Development Maximizes SAP S/4HANA

Adopting SAP S/4HANA is the beginning of the development of a digital platform for the future enterprise.

**EMEA: Which of the following capabilities for custom application development are (or will be) part of your SAP landscape?**

**Organizations look to the operating environment** to provide a platform on which a new generation of apps can be developed.

**There is a need to enable agile development methods at the fringes of SAP S/4HANA** to allow technology to keep up with the pace of business innovation.

**Containerization enables the porting of applications across secure, heterogeneous environments.**

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; EMEA including DACH n = 552

# The Right Operating Environment Boosts Business Value

## 1

---

### Security features

are most important for European organizations when choosing the best operating environment for SAP workloads.

## 2

---

### Integration platform

is the second most important factor, as SAP workloads will run in the context of cloud-native applications and need to be well integrated with the broader application landscape.

## 3

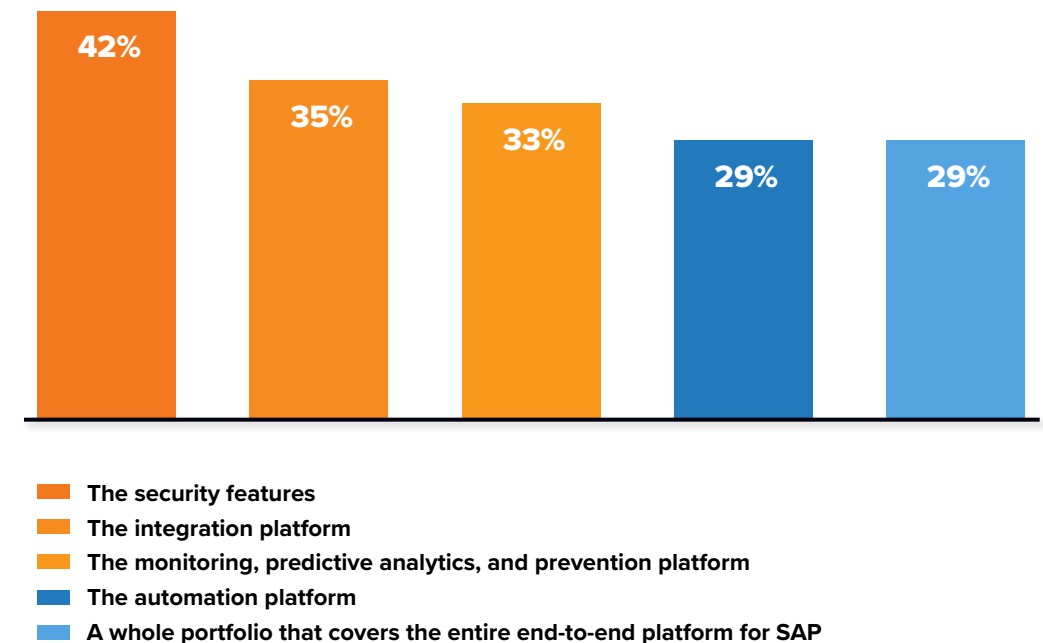

---

### Tools for performance optimization

are the third most important feature to provide a great user experience and to achieve operational efficiency of the digital platform.

**Beyond security, the role of the platform in integration is a decisive factor.**

**EMEA including DACH: Which of the following features were decisive for you to select that operating environment for your organization's SAP landscape?**

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; EMEA including DACH n = 552

# Taking SAP Modernization to the Next Level

To successfully build a modern infrastructure for SAP workloads, IDC recommends the following:

**Plan your SAP modernization journey in the context of cloud-native application innovation** to facilitate the commercial benefits of no lock-in and greater flexibility.

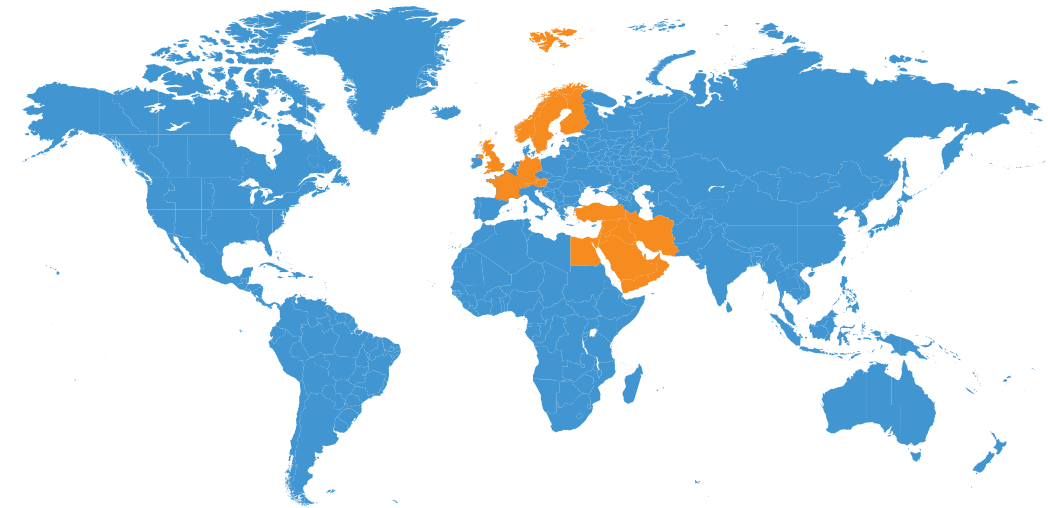

**Choose a consistent platform to seamlessly migrate the SAP environment** from bare metal or virtualized servers to private, hybrid, or public cloud.

**Add the strategic advantage of an open source operating ecosystem** to achieve end-to-end security, cost optimization through full abstraction, and long-term investment protection.

# Comparing Organizations in EMEA, DACH, and North America

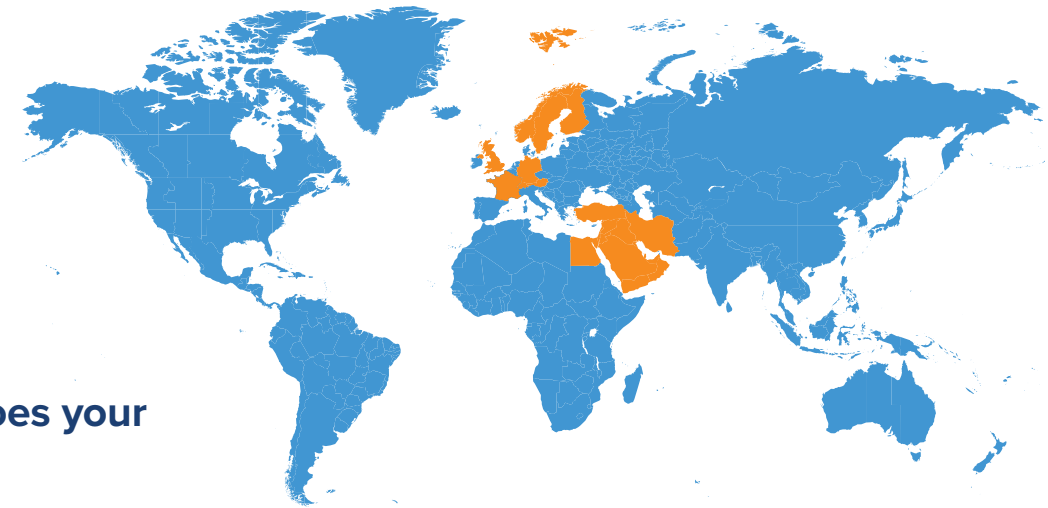

What does your current ERP estate look like?

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; North America n = 203, EMEA including DACH n = 552, DACH n = 151

# Comparing Organizations in EMEA, DACH, and North America (continued)

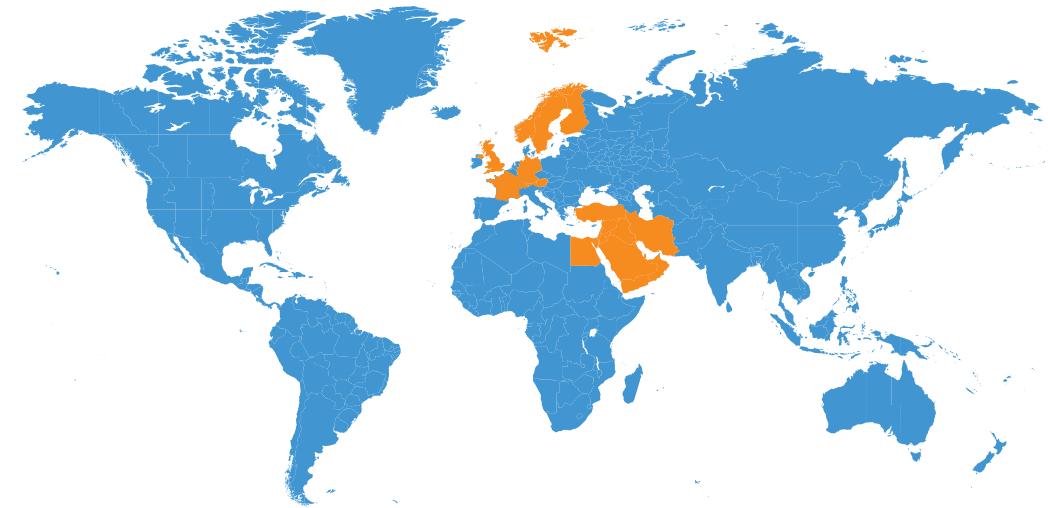

Which of the following general operating ecosystem capabilities does your organization use (or will use) to support the SAP landscape?

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; North America n = 203, EMEA including DACH n = 552, DACH n = 151

# Comparing Organizations in EMEA, DACH, and North America (continued)

Which of the following features were decisive for you to select that operating environment for your organization's SAP landscape?

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; North America n = 203, EMEA including DACH n = 552, DACH n = 151

# Methodology

IDC conducted a large (n = 1,212) international survey among businesses that are on an SAP modernization journey, including 552 businesses that have more than 100 employees, are located across EMEA, and come from various industries. The survey was to determine what businesses' current ERP state is, their aspirations and challenges, and what role the Linux operating system plays in the transformation of their SAP ERP landscape.

## COUNTRIES

## COMPANY SIZE (employees)

Source: IDC's SAP Infrastructure Survey, sponsored by Red Hat, 2020; global n = 1,212, Europe, the Middle East, and Africa (EMEA) n = 552, Germany, Austria, and Switzerland (DACH) n = 151

# About the Analysts

## **Carla Arend**

Senior Program Director, Lead Analyst,  
Cloud in Europe, IDC

Carla Arend is a senior program director with the European Software and Infrastructure research team and heads up IDC's European cloud research. Carla provides industry clients with key insight into market dynamics, vendor activities, and end-user adoption trends in the European cloud market. As part of her research, she covers topics such as how European organizations are adopting cloud, how cloud drivers and inhibitors are evolving, cloud management, cloud security, data management in the cloud, IoT and cloud, AI and cloud, Devops and cloud, as well as GDPR impact on cloud and cloud code of conduct.

[More about Carla Arend](#)

## **Tom Seal**

Senior Research Director,  
European Software, IDC

Tom Seal is a senior research director in IDC's European enterprise applications team and has over 20 years experience as an analyst, consultant, and technology procurement manager. He focuses on the ERP market and the future of the finance function. Current research includes investigating the business case for ERP modernization and the economics of cloud technology. In addition, he is part of IDC's Intelligent Business Operations and Augmented Humanity practices.

# Message from the Sponsor

Red Hat helps SAP enterprises standardize on a single, open platform and build on a foundation that sets them up for a future of innovation with a rich portfolio of flexible solutions. From standards-based solutions for automation, management, and integration, to app containerization and open hybrid cloud, Red Hat's SAP portfolio supports any on-premises or cloud environment with freedom from vendor lock-in. Not just an operating system, Red Hat solutions are driving intelligent enterprises through optimized stability, scalability, and security for SAP deployments. Red Hat is a market leader in Linux, multicloud container development, and infrastructure automation, with a rich history in the open source community.
