Observable

Capable of being or liable to be observed noticeable, visible, discernible.

Deserving of attention noteworthy.

In a digital business, IT teams need a new approach to observability and application performance management. IT can only manage and optimise what it can see, which is why today's modern DevOps and technical IT teams are turning to SolarWinds Observability.

Putting the visible into observable. SolarWinds Observability, available to Westcon-Comstor partners, is a unified monitoring, observability, and service management platform. Unlike traditional application performance management tools, it considers everything capable of impacting an application.

It allows businesses to unify and extend visibility across the technology stack that forms the foundation of digital applications. And it does this by looking at database performance, the network, the application itself, and the infrastructure behind it all — pooling this information to create a health score offering a single source of truth.

This gives DevOps, technical, and business teams insights into operation, visibility into performance, and the intelligence required to manage application environments better.

Complete observability

SolarWinds is a leader in digital experience monitoring, and SolarWinds Observability provides customers with unified and comprehensive visibility for cloud-native, custom web applications. The results? Better service levels, improved user satisfaction, superior business services – with a tool that monitors cloud-based apps' performance and resilience.

Eliminate Tool Sprawl - Simplify and streamline your tool landscape while gaining a holistic, centralised view with valuable insights and practical information.

Complete observability

Accelerate issue resolution - Enhance problem-solving speed with embedded intelligence and actionable suggestions generated from comprehensive data collected throughout the system.

Reduce alert fatigue - Mitigate overwhelming alert volumes by implementing AIOps, machine learning (ML), and a tailored metric-driven solution that automatically highlights and addresses genuine issues.

Accelerate cloud modernisation - Facilitate the transition to cloud-based systems with a cloud-native, multi-tenant observability solution that seamlessly integrates with SolarWinds Hybrid Cloud Observability.

This integration ensures a unified perspective across multi-cloud, hybrid, and on-premises environments, speeding up cloud modernisation.

Feature-rich observability!

Built-in intelligence	Comprehensive visibility	Easy to use
Native AI and ML-based technologies users can better view and rank problems automatically.	Provides a unified view of data from all aspects of an environment, providing service relationship views, dependency maps, and multi-level drill-downs.	Easily installed, auto-instrumented, and provides.
view and rank problems automatically.	relationship views, dependency maps, and multi-level drill-downs.	support for open-source technologies.
Maximum flexibility With a modular platform, scale seamlessly as the needs of the business change.	Cloud-native Perfect for multi-cloud environments, supporting open-source frameworks, cloud-native technologies, and third-party integrations.	Integrates with Hybrid Cloud Observability Get a unified view of multi-cloud, hybrid, and on-premises environments.

Availability of Observability

Observable with Westcon-Comstor

Immediately available to certified SolarWinds resellers from Westcon-Comstor in tailored monthly packages via custom-designed instances.

Modules include:

- Application Observability
- Network and Infrastructure Observability
- Log Observability
- Database Observability
- Digital Experience Observability - Synthetic
- Digital Experience Observability - Real User Monitoring

Ask your Westcon-Comstor account manager how you can tailor a package to match your customer's requirements, pay as you use and scale as you grow, with customised monthly billing options.

A global partner of SolarWinds, Westcon-Comstor provides resellers access to the skills, information, knowledge, and technical know-how they need to deliver, deploy, and manage SolarWinds implementations.

With Westcon-Comstor as your selected distributor, you get the value you need from your partnerships. Value is delivered through Education services, an end-to-end global logistics supply chain, professional services, and scalable support services, including virtual support, remote monitoring, or on-site engineering expertise.

Let us act as an extension of your team as you unlock the power of observability and give your clients the application visibility they need. Let us help you bring them the power of SolarWinds Observability.
